

FSM high Flow Perforation

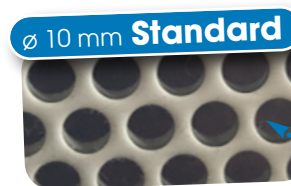

We use this special perforation for high hydraulic load cases which do not allow increases in upstream water levels. **The free surface is increased in high flow perforation by more than 20%.**

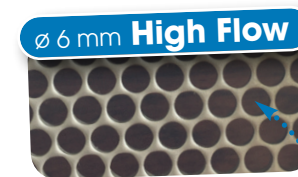

Free area 51%

Free area 54%

Free area 63%

The advantages at a glance

1. can be retrofitted with the same hydraulics
2. higher screenings capture rate by reducing the hole width
3. no detrimental effect on the service life of the perforated filter elements
